

Julius Njeru Thuo

Full Stack Software Engineer

Nairobi, Kenya • LinkedIn: [linkedin.com/in/juliusnjeruthuo/](https://www.linkedin.com/in/juliusnjeruthuo/) • GitHub: github.com/njeruthuo
KCNA Certified • Google Associate Cloud Engineer (In Progress) Email: juliusn411@gmail.com

PROFESSIONAL SUMMARY

Full Stack Software Engineer with 2+ years of experience building scalable web and mobile applications in Python, Django, FastAPI, React, TypeScript, and React Native. Delivered production-grade systems across transportation/logistics domains, including a risk assessment engine that reduced creditor risk exposure by 95%. Holds KCNA certification with cloud-native expertise and hands-on experience with PostgreSQL, Redux, RTK Query, and Expo. Passionate about quickly building high-quality data platforms and AI-integrated products from end-to-end.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL, YAML

Backend: Django, FastAPI, REST APIs, PostgreSQL

Frontend / Mobile: React, React Native, Expo, TypeScript, Redux, RTK Query, MUI

Cloud & DevOps: AWS (familiar), Kubernetes (KCNA), Docker, EAS Build, Git, CI/CD

Data & AI: pytesseract (OCR), PapaParse, PDF/document generation

PROFESSIONAL EXPERIENCE

Software Engineer | Rivercross 2023 – Present

Transportation Management System (TMS) — Web & Mobile (React/TypeScript, Python, PostgreSQL)

- Shipped features across a django backend and React(TS) frontend (mobile and web).
- Worked with complex data structures to support our tracking systems.
- Refactored large codebases to improve performance, reliability and stability of the flagship products.
- Engineered a risk assessment engine for asset financiers that reduced creditor risk exposure by 95%, integrating real-time data evaluation logic into the financing workflow.
- Built a cross-platform mobile application for TMS using React Native and Expo.
- Worked with FastApi to create microservices that supported other applications with the risk analysis services.
- Collaborated in a hybrid team environment, contributing across full stack — Django/FastAPI backend APIs, React web frontend, and React Native mobile.
- Identified and documented how we can reduce our operation costs by 20% reduction of cloud bills.
- Built tooling to generate automatic reports for our clients in pdf formats

KEY PROJECTS

OCR Document Generator | Final Year Project 2022 – 2023

Python, pytesseract, PDF generation

- Built an OCR-powered tool to extract text from lecture note images using pytesseract, solving a real student problem where course materials were provided as images/screenshots.

- Produced editable intermediate documents allowing users to correct misread text before exporting to clean, shareable PDFs — used actively by peers.
- Demonstrated end-to-end document intelligence pipeline: image ingestion → text extraction → structured document output.

CERTIFICATIONS

Kubernetes and Cloud Native Associate (KCNA) — CNCF / Linux Foundation

Google Associate Cloud Engineer — In Progress (2026)

EDUCATION

BSc. Computer Science | [Laikipia University](#) 2019 – 2023
